The Problem

- **Cab availability drops sharply in monsoon and during peak hours exactly when women most need a reliable ride.**
- **SOS buttons are passive; they only help if someone is calm and free enough to press one.**
- **OTPs verify a phone number, not the person getting into the car.**
- **Hybrid work has pushed more commutes.**

The Solution

SARA is a women-focused cab app built around safety, reliability, and faster ride availability. AI-powered face verification helps ensure the booked driver matches the verified profile, while an intelligent backup system automatically searches for a replacement driver within 1 minute if a ride is cancelled. Rain Mode and Heavy Traffic Mode dynamically boost driver search and optimise supply to reduce waiting and cancellation times when demand spikes. It also offers part-time jobs for women as drivers.

The goal: a safer, more reliable ride , without the uncertainty of waiting, searching, or being left stranded.

Three Features That Set SARA Apart

01 – AI Face Verification Ride-Start

Rides start on a face match to the registered passenger, not an OTP confirming the right person is actually getting in

02 – Voice-Distress SOS for passengers and woman drivers

The app listens for stress signals in either the passenger's or driver's voice and can alert police automatically no button, no delay.

03– Peak-Hour, Women-First Model

Runs 8-11 AM and 5-9 PM which is the highest-risk commute windows, giving drivers a structured part-time option too.

Why SARA Wins

- **Speed –Active safety, not passive: distress is detected automatically from voice, instead of waiting on a manual SOS press.**
- **Certainty –A face match replaces a forward-able OTP, closing the one verification gap every competitor still leaves open.**
- **Response –Direct-to-police alerting cuts out the extra step of a call centre or in-app support queue relaying the emergency.**
- **Focus –Concentrating on the two highest-risk windows means denser, more reliable driver supply exactly when rivals thin out.**
- **Supply– Peak-hours-only shifts pull in a driver pool that won't commit to full-day driving, widening supply where it's scarcest.**

Business Model

- **Per-ride commission, priced competitively to build early trust and volume.**
- **B2B safe-commute partnerships with corporates women employees.**
- **Police-partnered SOS network, reinforcing both safety and city-level credibility.**

What We're Looking For

Mentorship to scale AI-powered driver verification and SureCommute for women, support in structuring police-response partnerships and distress detection, and early seed funding for a single-city pilot focused on peak commute hours so women never have to worry about being stranded, frustrated by endless cab cancellations, or forced to compromise on safety just to get home.

SARA – because a safe ride home shouldn't depend on luck.

SARA

AI-enabled smarter Commute

9am to 11am and 5pm to 10pm

No waiting in rains or heavy traffics

Faster rides. Every time.

No waiting in rains

No waiting in heavy traffics

Rain Mode

More drivers on the road when you need them.

Backup in 1 minute

If a ride is cancelled, we find you another driver within 1 minute.

Heavy Traffic Mode

Smart routing & more drivers to get you moving faster.

Intelligent modes. Faster matches. Zero delays.

Reliable Rides, Women-First

AI-enabled SARA (Smart AI Ride Assistant) sure cabs for Monsoon and Peak Hours only for Women!

A cab that won't cancel on you 🥰
